

CS3243 Assignment 4

Zhuang Jianing

A0214561M

T03

3. 8-Puzzle

$f(\text{state}) = \# \text{ of mismatched tiles compared to goal state}$

always choose action that leads to state with lowest cost

action valid only if $f(\text{next-state}) \leq f(\text{current-state})$

1	2	3
8		4
7	6	5

goal state

a)

①

2	3	
1	8	4
7	6	5

initial state

$$f(\text{initial}) = 4$$

empty space can move left or down

2	3	
1	8	4
7	6	5

$$f(\text{left}) = 3$$

$$f(\text{left}) < f(\text{initial})$$

2	3	4
1	8	
7	6	5

$$f(\text{down}) = 5$$

left chosen

②

2		3
1	8	4
7	6	5

current

$$f(\text{current}) = 3$$

empty space can move left, down or right

	2	3
1	8	4
7	6	5

$$f(\text{left}) = 2$$

$$f(\text{left}) < f(\text{current})$$

2	8	3
1		4
7	6	5

$$f(\text{down}) = 3$$

back to ①

$$f(\text{right}) = 4$$

left chosen

③

	2	3
1	8	4
7	6	5

current

$$f(\text{current}) = 2$$

empty space can move down or right

1	2	3
	8	4
7	6	5

$$f(\text{down}) = 1$$

$$f(\text{down}) < f(\text{current})$$

back to ②

$$f(\text{right}) = 3$$

down chosen

(4)

1	2	3
	8	4
7	6	5

current

$$f(\text{current}) = 1$$

empty space can move up, down, right

back to (3)

$$f(\text{up}) = 2$$

1	2	3
7	8	4
	6	5

$$f(\text{down}) = 2$$

1	2	3
8		4
7	6	5

$$f(\text{right}) = 0$$

goal state ✓

right chosen

sequence of actions \Rightarrow [left, left, down, right]goal state reached is a global minimum

h)

(1)

2	3	
1	7	4
8	6	5

initial state

$$f(\text{initial}) = 5$$

empty space can move left or down

2		3
1	7	4
8	6	5

$$f(\text{left}) = 4$$

2	3	4
1	7	
8	6	5

$$f(\text{down}) = 6$$

left chosen

(2)

2		3
1	7	4
8	6	5

current

$$f(\text{current}) = 4$$

empty space can move left, down or right

	2	3
1	7	4
8	6	5

$$f(\text{left}) = 3$$

2	7	3
1		4
8	6	5

$$f(\text{down}) = 4$$

back to (1)
 $f(\text{right}) = 5$

left chosen

(3)

	2	3
1	7	4
8	6	5

current

$$f(\text{current}) = 3$$

empty space can move down or right

1	2	3
	7	4
8	6	5

$$f(\text{down}) = 2$$

back to (2)

$$f(\text{right}) = 4$$

down chosen

④

1	2	3
	7	4
8	6	5

current

$$f(\text{current}) = 2$$

empty space can move up, down, right

back to ③
 $f(\text{up}) = 3$

up, down, right

1	2	3
8	7	4
	6	5

$f(\text{down}) = 1$ ✓

right

1	2	3
7		4
8	6	5

$f(\text{right}) = 2$

down chosen

⑤

1	2	3
8	7	4
	6	5

current

$$f(\text{current}) = 1$$

empty space can move up or right

back to ④

$f(\text{up}) = 2$

up or right

1	2	3
8	7	4
6		5

$f(\text{right}) = 2$

both moves lead to states with higher cost than current²

current is returned as a local minimum

sequence of actions \Rightarrow [left, left, down, down]

4. a)

b) $f(\text{state}) = \# \text{ pairs of adjacent vertices with the same colour}$

always choose action that leads to lowest cost
 - changing colour of single vertex

if tie break: try to use existing colours

① $f(\text{initial}) = 12$

(G) is connected to most vertices (5) of the same colour
 changing colour of G will result in lowest $f(\text{next_state})$ cost of $12 - 5 = 7$

try to use colours already currently used (red) to open up options e.g. A&C cannot be resolved it change (G) to red
 colour (G) red

② $f(\text{current}) = 12 - 5 = 7$

(C), (F), (D), (E) connected to most vertices (3) of same colour
 only changing (F) to red allowed
 colour (F) red

③ $f(\text{current}) = 7 - 3 = 4$

(C), (D), (E) connected to most vertices (2) of the same colour,
 new colour has to be used, tie break by alphabetical
 colour (C) blue

④ $f(\text{current}) = 4 - 2 = 2$

(E) is connected to most vertices (2) of same colour
 colour (E) blue (3) $f(\text{goal}) = 0$
